AI Automation Engineer building governed, production automation systems — self-hosted n8n on cloud infrastructure, LLM-integrated classification pipelines, and MCP server integration. Ships systems that stay auditable, overridable, and reversible by design, with tiered human-in-the-loop control at every decision boundary. Backed by seventeen years leading accuracy-critical, high-volume operations (2009–2026). Bilingual English/Spanish.

Skills

AI Governance & Enablement: Governance frameworks, workflow tier classification, build specifications, review gates, audit logging, human-in-the-loop control design, schema-projected data writes, failure-mode documentation, secure credential handling, post-deployment monitoring, operator handoff & training

AI & Intelligent Automation: LLM Integration (Anthropic Claude API, OpenAI, Gemini), Claude Code (agentic coding system), MCP (Model Context Protocol) server integration, Prompt Engineering, AI Agent Design, Hybrid LLM + Rule-Based Classification, Bounded Autonomy

Automation Platforms & Integration: n8n (self-hosted, multi-instance), Make (Integromat), Zapier, UiPath, RPA; REST APIs, Webhooks, OAuth 2.0 (Gmail, Google APIs), JSON Data Handling, Conditional Logic, Error Handling

Cloud Infrastructure & Operations: Hetzner Cloud (VPS operation), Docker (deployment operations), Postgres, Cloudflare (DNS, Pages, API), DNS records (SPF, DKIM, DMARC), Git and GitHub

Business Tools & Reporting: Excel Online, Office Scripts (Excel), Google Sheets, Google Forms, Microsoft Forms, Microsoft Teams, SharePoint, Notion, Reporting Automation

Professional Skills: Systems Thinking, Requirements Translation, Stakeholder Communication, Cross-Functional Coordination, Technical Mentorship Without Formal Authority, Operating in Ambiguity, Detail Orientation, Ethical AI Awareness

Professional Experience

BREALLE | Principal Consultant

Remote 04/2026 - Present

- Architected and now operates production automation systems under BREALLE governance, including a Tier 3 (highest-governance) applicant-intake pipeline and a Tier 2 review-gated, multi-niche lead-sourcing system (5 workflows, 87 nodes — see Technical Projects), targeting email-native local service businesses.
- Established and maintains a governance framework for production workflows, including tier ratings, build specifications, audit logging, schema-projected data writes, and codified failure-mode controls — with a maintained catalogue of workflow records as the system of record.
- Applies tiered human-in-the-loop controls at decision boundaries, using deterministic logic where accuracy is non-negotiable and AI only where it measurably improves the outcome, so delivered systems remain auditable, overridable, and reversible.
- Operates production infrastructure (Hetzner, Docker, Postgres) under documented operational standards covering ICP qualification, workflow classification, build governance, secure credential handling, and post-deployment monitoring across the AI automation lifecycle.
- Runs client discovery to map current-state processes and scope the problem before any build, then delivers documentation and a live walkthrough so the client team can operate and adjust the system without ongoing builder dependency.

WATCHTOWER BIBLE AND TRACT SOCIETY OF NEW YORK, INC.

Patterson, NY 02/2009 - 01/2026

Seventeen years of operations leadership in accuracy-critical, high-volume environments — process standardization, stakeholder translation, and training across non-technical teams. AI use during this tenure was limited to AI-assisted development of internal Office Scripts tooling; automation-platform and production client work began through TripleTen and BREALLE.

Operations Specialist & Systems Coordinator (Video Production Operations)

12/2020 - 01/2026

- Provided executive-level operational support for video production leadership, managing schedules, documents, and information flow during high-volume production cycles.
- Built supporting tools using Microsoft Forms, Excel Online, and Office Scripts to streamline administrative processes, document preparation, and recurring operational tasks — including AI-assisted development of Office Scripts code powering custom-search Excel Online sheets used in trainee evaluation.
- Coordinated cross-functional communication between leadership, production teams, and contributors, translating ambiguous direction into clear plans and standardized procedures.

Audition Manager - Coordinator

08/2019 - 01/2026

- Owned audition intake and evaluation workflows for multiple teams handling ~20,000 submissions annually, ensuring accuracy, fairness, and timely decision-making.
- Designed and operationalized the transition from in-person auditions to self-guided remote auditions, improving scalability, accessibility, and review consistency across high-volume submission cycles.
- Translated loosely defined creative and leadership expectations into clear evaluation criteria and repeatable processes.
- Served as the primary subject matter expert and training lead, supporting teams and leadership as the central operational point of contact.

Assistant Director

06/2018 - 08/2019

- Coordinated end-to-end production workflows supporting leadership in planning, scheduling, and execution across multi-role teams; served as an operational bridge between directors, performers, and support staff, translating creative intent into clear plans, timelines, and task assignments.

- Trained staff and volunteers in clear, calm communication during emergency-response and high-stress assignments; managed internal SharePoint sites and digital records, improving access to information and reducing friction for distributed teams.

Technical Projects

Regional Distributor Applicant Pipeline (Production)github.com/zohto/ai-automation-portfolio

Architected and shipped a Tier 3 production applicant intake and re-engagement pipeline for a live client, processing 10,580+ applicants across a 3-chain architecture (intake/qualification, outreach, reply handling) with audit logging across every routing decision. 100% classification coverage; 71% auto-filtered before human review.

- Built deterministic keyword-score classification with banded routing and hard pre-gates (missing contact info, out-of-territory); human-in-the-loop approval gate required before any outreach send.
- Implemented production governance controls: daily-cap pacing, halt-on-rate-limit circuit breakers, schema-projected Sheets writes, shared error-workflow routing, and operator-initiated on-demand execution endpoints.
- Conducted internal governance review of the deployment, identifying four control gaps (external error alerts, manual fallback, health monitoring, reply-classification fallback) and prioritizing remediation.
- Delivered a workflow map, a working Google Sheets interface the client team operates directly, and a live walkthrough — leaving the client able to operate, monitor, and adjust the pipeline directly.

BREALLE Lead Generator (Production)github.com/zohto/ai-automation-portfolio

A multi-niche outbound lead sourcing and enrichment pipeline (5 coordinated workflows, 87 nodes) spanning property management, cleaning, restoration, HVAC, and light-industrial staffing verticals. Tier 2 production system requiring review and approval of every outreach draft before send.

- Built n8n pipeline integrating Apollo (discovery + enrichment) with Hunter.io fallback and a NeverBounce verification gate, so every address is deliverability-checked before reaching the outreach pool.
- Implemented gap-aware usage and credit-budget controls tracking lead volume against a fixed monthly vendor-credit budget, preventing mid-cycle exhaustion across verticals.
- Designed a schema-locked Google Sheets pipeline with explicit field projection at every transform step, plus centralized event logging and shared error-workflow routing.

AI Request Routing & Operational Triage Systemgithub.com/zohto/ai-automation-portfolio

LLM-powered request routing workflow that eliminates manual triage and converts operational requests into structured, actionable data.

- Implemented LLM-based classification to identify request type, priority, and responsible department, with standardized JSON output supporting reliable downstream automation.
- Built confidence validation logic routing uncertain cases to human review, preserving operational oversight at the decision boundary.
- Implemented automated logging of every routing decision to create traceability and operational transparency.

Education & Certification

TripleTen | AI Automation Program

Remote 12/2025 - 03/2026

Intensive project-based program: Make, Zapier, n8n, UiPath, API integration, webhooks, prompt engineering, LLM-powered workflows, AI agent fundamentals, and human-in-the-loop system design. Designed and deployed production-style automation workflows for customer support and internal operations; documented system logic, assumptions, and failure modes in production-oriented artifacts.
