

Brandon Robinson

zohto.ai@gmail.com | (413) 433-6459 | [LinkedIn](#) | [GitHub Portfolio](#) | Springfield, MA | Open to Relocation

AI Automation Engineer specializing in AI-assisted workflow systems for accuracy-critical, high-volume operations. Systems-oriented builder who translates complex business processes into reliable, auditable automation. Experienced in analyzing real-world workflows, identifying bottlenecks, and designing solutions that improve decision speed, reduce manual effort, and create operational clarity.

Skills

Automation & RPA Platforms: Make (Integromat), Zapier, n8n (self-hosted, multi-instance), Robotic Process Automation (RPA), UiPath, UiPath Web Studio

AI & Intelligent Automation: LLM Integration (Anthropic Claude API, OpenAI, Gemini), Claude Code (agentic IDE for AI-assisted development), MCP (Model Context Protocol) server integration, AI-Assisted System Design, Prompt Engineering, AI Agent Design, Hybrid LLM + Rule-Based Classification, Human-in-the-Loop Systems, Bounded Autonomy

Integrations, Data & Logic: REST APIs, Webhooks, OAuth2 (Gmail, Google APIs), JSON Data Handling, System Integrations, Conditional Logic, Error Handling

Cloud Infrastructure & Operations: Hetzner Cloud (VPS operation), Docker (deployment operations), Cloudflare (DNS, Pages, API), DNS records (SPF, DKIM, DMARC for deliverability), Git / GitHub

Business Tools & Reporting: Excel Online, Office Scripts (Excel), Google Sheets, Google Forms, Microsoft Forms, Microsoft Teams, Reporting Automation

Workflow & Operations Design: Workflow Analysis, Workflow Automation, Process Mapping, Automation Testing & Validation, Accuracy-Critical Operations, Auditability & Oversight, Requirements Translation, Governance Frameworks, Production Workflow Operations

Professional Skills: Systems Thinking, Analytical Problem Solving, Stakeholder Communication, Cross-Functional Coordination, Change Management, Detail Orientation, Ethical AI Awareness

Technical Projects

Regional Distributor Applicant Pipeline (Production) | [View Case Study](#)

Architected and shipped a Tier 3 production applicant intake and re-engagement pipeline for a live client, processing 10,580+ applicants across a 3-chain architecture (intake/qualification, outreach, reply handling) with audit logging across every routing decision.

- Built deterministic keyword-score classification with banded routing and hard pre-gates (missing contact info, out-of-territory); human-in-the-loop approval gate required before any outreach send.
- Implemented Tier 3 CAN-SPAM-adjacent controls: daily-cap pacing (25/day, NY-timezone), halt-on-Gmail-rate-limit circuit breakers, schema-projected Sheets writes, shared error-workflow routing, and operator-triggerable on-demand execution endpoints.
- Conducted internal governance review of the deployment, identifying four control gaps (external error alerts, manual fallback, health monitoring, reply-classification fallback) and prioritizing remediation — the kind of honest post-deployment review enterprise systems require.

AI Request Routing & Operational Triage System | [GitHub](#)

Designed an LLM-powered request routing workflow that eliminates manual triage and converts operational requests into structured, actionable data.

- Implemented LLM-based classification to identify request type, priority, and responsible department.
- Structured incoming requests into standardized JSON outputs to support reliable downstream automation and auditing.
- Built confidence validation logic to route uncertain cases to human review, preserving operational oversight.
- Implemented automated logging of routing decisions to create traceability and operational transparency.

AI-Powered Customer Support | [GitHub](#)

Designed an AI-assisted customer support workflow to reduce routing friction and investigation delays while preserving human judgment.

- Analyzed multi-channel support intake to identify bottlenecks caused by manual logging, misrouting, and repeated handoffs.
- Built an automated intake and triage flow that structures inquiries into standardized JSON before agent involvement.
- Implemented smart ticket classification and routing with supervisor oversight to improve first-time assignment accuracy.
- Integrated AI-assisted investigation support to surface relevant knowledge and summarize context, accelerating resolution without removing human decision authority.

BREALLE Lead Generator (Production)

A multi-niche outbound lead sourcing and enrichment pipeline targeting email-native local service businesses (property management, cleaning, restoration verticals). Tier 2 production system feeding the BREALLE outreach engine, which requires founder review and approval of every outreach draft before send.

- Built n8n-based sourcing pipeline integrating Apollo (lead enrichment) and Hunter.io (email discovery) with structured deduplication and gap-aware lead-cap logic for credit-budget management across cycles.

- Designed schema-locked Google Sheets pipeline with status tracking, dedup keys, and audit-traceable column projection at every transform step.
- Operates under Tier 2 governance: documented build specs, audit logging, error-workflow routing, and post-deployment monitoring.

Personal Finance Automation Pipeline | [View on GitHub](#)

Built a multi-workflow personal expense automation that ingests financial emails from two Gmail accounts, classifies transactions with an LLM, writes structured records to Notion for human review, and runs daily auto-reconciliation against a per-month, per-category Budget database.

- Implemented LLM-based transaction extraction and classification via Claude Haiku with structured JSON output (vendor, amount, date, category, account, confidence) for reliable downstream automation.
- Designed a 5-workflow architecture spanning email intake, classification, store-level human review and correction in Notion, and a separate daily reconciliation workflow that upserts Budget rows and links Expense → Budget by category and month.
- Built deterministic Payer-override logic (card pattern × category) on top of the LLM output to encode business rules the model shouldn't decide on its own — bounded autonomy applied to a real-life pipeline.

Professional Experience

TRIPLETEN | AI Automation Engineer (Training Program)

Remote 12/2025 - 03/2026

- Designed and deployed production-style automation workflows for customer support and internal operations using Make, n8n, Zapier, and UiPath.
- Audited manual processes to identify failure points, then prototyped and shipped automated solutions with clear decision boundaries.
- Applied operational constraints and guardrails to ensure workflows remained auditable, overridable, and usable by non-technical teams under real operating conditions.
- Documented system logic, assumptions, and failure modes in production-oriented artifacts to support transparency and iteration.

BREALLE | Founder

Remote 04/2026 - Present

- Architected and operates two production workflows under BREALLE governance: the Regional Distributor applicant pipeline (Tier 3, see Technical Projects) and a multi-niche Lead Generator (Tier 2) targeting email-native local service businesses.
- Established and maintains a governance framework for production workflows, including tier ratings, build specifications, audit logging, schema-projected data writes, and codified failure-mode controls.
- Operates production infrastructure (Hetzner, Docker, Postgres) under documented operational standards covering ICP qualification, workflow classification, build governance, and post-deployment monitoring across the AI automation lifecycle.

WATCHTOWER BIBLE AND TRACT SOCIETY OF NEW YORK, INC.

Patterson, NY 02/2009 - 01/2026

Operations Specialist & Systems Coordinator (Video Production Operations)

12/2020 - 01/2026

- Provided executive-level operational support for video production leadership, managing schedules, documents, and information flow during high-volume production cycles.
- Built supporting tools using Microsoft Forms, Excel Online, and Office Scripts to streamline administrative processes, document preparation, and recurring operational tasks.
- Coordinated cross-functional communication between leadership, production teams, and contributors, translating ambiguous direction into clear plans and standardized procedures.

Audition Manager - Coordinator

08/2019 - 01/2026

- Owned audition intake and evaluation workflows for multiple teams handling ~20,000 submissions annually, ensuring accuracy, fairness, and timely decision-making.
- Designed and operationalized the transition from in-person auditions to self-guided remote workflows, improving scalability, accessibility, and review consistency across high-volume submission cycles.
- Translated loosely defined creative and leadership expectations into clear evaluation criteria and repeatable processes.
- Served as the primary subject matter expert and training lead, supporting teams and leadership as the central operational point of contact.

Assistant Director

06/2018 - 08/2019

- Coordinated end-to-end production workflows supporting leadership in planning, scheduling, and execution across multi-role teams.
- Served as an operational bridge between directors, performers, and support staff, translating creative intent into clear plans, timelines, and task assignments.

Reception, Training, and Operations Support

02/2009 - 06/2018

- Trained staff and volunteers in clear, calm communication during emergency-response and high-stress assignments.
- Managed internal SharePoint sites and digital records, improving access to information and reducing friction for distributed teams.

Education & Certification

TripleTen | AI Automation Specialist Program
