

Brandon Robinson

zohto.ai@gmail.com | (413) 433-6459 | [LinkedIn](#) | [GitHub Portfolio](#) | Springfield, MA | Open to Relocation

AI Automation Engineer specializing in AI-assisted workflow systems for accuracy-critical, high-volume operations. Systems-oriented builder who translates complex business processes into reliable, auditable automation. Experienced in analyzing real-world workflows, identifying bottlenecks, and designing solutions that improve decision speed, reduce manual effort, and create operational clarity.

Skills

Automation & RPA Platforms: Make (Integromat), Zapier, n8n, Robotic Process Automation (RPA), UiPath, UiPath Web Studio

AI & Intelligent Automation: LLM Integration (OpenAI, Gemini), Prompt Engineering, AI Agent Design, AI-Assisted Decision Support, Human-in-the-Loop Systems

Integrations, Data & Logic: REST APIs, Webhooks, JSON Data Handling, System Integrations, Conditional Logic, Error Handling

Business Tools & Reporting: Excel Online, Office Scripts (Excel), Google Sheets, Google Forms, Microsoft Forms, Microsoft Teams, Reporting Automation

Workflow & Operations Design: Workflow Analysis, Workflow Automation, Process Mapping, Automation Testing & Validation, Accuracy-Critical Operations, Auditability & Oversight

Professional Skills: Systems Thinking, Analytical Problem Solving, Stakeholder Communication, Cross-Functional Coordination, Change Management, Detail Orientation, Ethical AI Awareness

Technical Projects

Portfolio: github.com/zohto/ai-automation-portfolio (AI Automation Projects & Case Studies)

Lead Intake & Onboarding Workflow Analysis (In Progress) | [View Case Study](#)

Conducting real-world workflow analysis for a small distributor to identify automation opportunities across lead intake, onboarding, and recruitment operations.

- Developed an initial case study based on observed workflows, identifying delays in lead follow-up, document collection, and manual tracking.
- Conducted stakeholder discovery call to validate current processes and uncover operational bottlenecks.
- Evaluating system constraints (RBO platform dependency) to ensure proposed solutions align with existing infrastructure.
- Preparing on-site workflow mapping to analyze full lead lifecycle and identify high-impact automation opportunities.
- Designing pilot automation concepts focused on lead routing, follow-ups, and recruitment pipeline efficiency.

AI Request Routing & Operational Triage System | [GitHub](#)

Designed an LLM-powered request routing workflow that eliminates manual triage and converts operational requests into structured, actionable data.

- Implemented LLM-based classification to identify request type, priority, and responsible department.
- Structured incoming requests into standardized JSON outputs to support reliable downstream automation and auditing.
- Built confidence validation logic to route uncertain cases to human review, preserving operational oversight.
- Implemented automated logging of routing decisions to create traceability and operational transparency.

AI-Powered Customer Support | [GitHub](#)

Designed an AI-assisted customer support workflow to reduce routing friction and investigation delays while preserving human judgment.

- Analyzed multi-channel support intake to identify bottlenecks caused by manual logging, misrouting, and repeated handoffs.
- Built an automated intake and triage flow that structures inquiries into standardized JSON before agent involvement.
- Implemented smart ticket classification and routing with supervisor oversight to improve first-time assignment accuracy.
- Integrated AI-assisted investigation support to surface relevant knowledge and summarize context, accelerating resolution without removing human decision authority.

Weather-Based Sales & Staffing Automation | [GitHub](#)

Architected a scheduled operational workflow that retrieves real-time weather data from external APIs and evaluates conditions before daily operations begin.

- Implemented conditional logic paths for normal versus severe weather scenarios, triggering manager-facing alerts for temperatures above 91°F and storm conditions.
- Translated raw forecast data into structured, decision-ready recommendations for staffing levels, inventory focus, and promotional planning.
- Automated daily delivery of operational summaries by email, eliminating manual weather checks and last-minute adjustments.

Professional Experience

TRIPLETEN | AI Automation Engineer (Training Program) | Remote

12/2025 - 03/2026

- Designed and deployed production-style automation workflows for customer support and internal operations using Make and n8n.
- Audited manual processes to identify failure points, then prototyped and shipped automated solutions with clear decision boundaries.
- Applied operational constraints and guardrails to ensure workflows remained auditable, overridable, and usable by non-technical teams under real operating conditions.
- Documented system logic, assumptions, and failure modes in production-oriented artifacts to support transparency and iteration.

WATCHTOWER BIBLE AND TRACT SOCIETY OF NEW YORK, INC. | Patterson, NY

02/2009 - 01/2026

Operations Specialist & Systems Coordinator (Video Production Operations)

12/2020 - 01/2026

- Built internal form-to-data systems using Microsoft Forms, Excel Online, and Office Scripts, eliminating manual preparation and improving auditability across thousands of records.
- Translated loosely defined creative and leadership requirements into structured, repeatable operational procedures.
- Led the operational transition from in-person processes to remote, self-guided workflows, improving scalability and accessibility.
- Served as the primary operational point of contact, maintaining trust across leadership, contributors, and review teams during high-volume cycles.

Audition Manager - Coordinator

08/2019 - 01/2026

- Owned audition intake and evaluation workflows for multiple teams handling ~20,000 submissions annually, ensuring accuracy, fairness, and timely decision-making.
- Designed and operationalized the transition from in-person auditions to self-guided remote workflows, improving scalability, accessibility, and review consistency across high-volume submission cycles.
- Translated loosely defined creative and leadership expectations into clear evaluation criteria and repeatable processes.
- Maintained trust across performers, evaluators, and leadership by balancing authority direction with operational clarity.
- Served as the primary subject matter expert and training lead, supporting teams and leadership as the central operational point of contact.

Assistant Director

06/2018 - 08/2019

- Coordinated end-to-end production workflows supporting leadership in planning, scheduling, and execution across multi-role teams.
- Served as an operational bridge between directors, performers, and support staff, translating creative intent into clear plans, timelines, and task assignments.
- Managed schedules, communications, and real-time adjustments to ensure productions stayed aligned with quality, timing, and resource constraints.
- Supported decision-making by tracking status, resolving conflicts, and surfacing risks or bottlenecks before they impacted delivery.

Reception, Training, and Operations Support

02/2009 – 06/2018

- Served as a primary point of contact for thousands of visitors, operating in a high-trust role requiring discretion, empathy, and independent judgment.
- Trained staff and volunteers in clear, calm communication during emergency-response and high-stress assignments.
- Managed internal SharePoint sites and digital records, improving access to information and reducing friction for distributed teams.

Education & Certification

TripleTen | AI Automation Specialist Program | Remote

03/2026

Intensive, project-based program focused on AI automation and workflow design, including Make, Zapier, n8n, API integration, webhooks, prompt engineering, LLM-powered workflows, AI agent fundamentals, and human-in-the-loop system design.
